Cloud Computing and Ubiquitous Support for Coaches

Posted on [21 September, 2010](#) | [Leave a comment](#)

I am attending the Asian Conference of Computer Science in Sports (ACCSS) in Tokyo later this week. The conference is being held at the [Japan Institute of Sports Sciences](#).

Cloud computing is transforming the ways in which sport coaches work with athletes and enrich their own professional development.

Convenient, on-demand
network access to a shared
pool of configurable
computing resources ...

NIST, 2009

that can be rapidly provisioned and released **with minimal management effort** or service provider interaction.

You got the remote, now you control the video for everyone - when you play, pause, or seek, so does everyone else! You can also pick a new video, or give someone else the remote by going to their picture below and click 'Pass Remote'. [Find A Video](#) [\(Close\)](#)

Type "social" into a YouTube URL before the ".com" to watch it with your friends!

Which means:
<http://www.youtube.com/watch?v=qybUFnY7Y8w>

Would become this instead:
<http://www.youtubesocial.com/watch?v=qybUFnY7Y8w>

Copy this URL and send it to friends to bring them to this party! Or, log in through Facebook and you can invite your Facebook friends by posting the party information on their wall!

You have the remote!

Drag friends here

Party URL - send to friends to invite them! <http://tinyurl.com/2bp8mag> [Copy URL](#) [Find A Video](#)

Cloud computing resources are offering coaches opportunities to monitor their own practice

... and create rich learning environments for athletes

Some coaches are making use of these resources themselves ...

whilst others are being supported by Internet-aware colleagues.

Coaches and their helpers
are building their practice
through the use of iterative
'good enough' approaches
to digital repositories.

Many of them are managing the risk of using the cloud ...

and are doing so in a way that is transforming the coach-athlete relationship in a digital age.
